

Governing Global Goals:

Uniting knowledge and perspectives on the SDGs for inclusive development

Factsheet

“The amount of research, knowledge and evidence about the implementation of the SDGs is growing and can be overwhelming from a policymaking perspective. That is why it is important to connect research and policy in effective ways to ensure that the knowledge helps us accelerate progress towards achieving the SDGs. ”

This project, focused on Knowledge Brokering & Synthesis (KBS), serves to bring the insights of the three other research consortia together and make sure that the research outcomes become more than the sum of their parts.

To do so, the project will analyse, synthesise and disseminate the research findings and pro-actively build bridges between academics, policymakers and development practitioners to facilitate multidirectional knowledge exchange.

Main Research question(s)

What are effective ways of building bridges between SDG research and policymaking realities to stimulate fruitful knowledge-exchange for improved policy design and implementation?

Research led by:

Dr. Nicky Pouw (University of Amsterdam). Associate Professor in Economics of Wellbeing at the Governance and Inclusive Development research programme.

Research group and affiliated universities

Prof. Dzodzi Tsikata (University of Ghana). Research professor development sociology and Director of the Institute of African Studies (IAS).

Jorrit Oppewal (The Broker). Knowledge broker.

Country Focus

The project has no strict country focus, as it seeks to bring together the findings of the different research consortia, compare and contrast these with other sources of information, and establish effective linkages with policymaking communities, both at the national and international levels.

Planned Activities

Planned activities include supporting robust methodological design, the production of synthesis papers, accessible reports, online knowledge exchanges, blogposts and annual workshops, a final multistakeholder conference as well as a post-doc research project focused on science-policy interactions in the context of SDG implementation.

Target Audience

The target audience consists primarily of policymakers and researchers, but also includes who stakeholders who can play a role in putting knowledge to practice.

What are the anticipated or hoped for results?

Through this project we hope to increase the impact of the other three research consortia on SDG interactions, by synthesising the findings and engaging relevant policymakers for effective dissemination, all to stimulate the translation of results to practice.
